Climate Change: Prioritizing Our Global and Local Response
Interlaken Lecture Series: Faith to Save the Earth
How can we respond to the climate crisis and safeguard our shared future?
How can we share this crisis and its implications among the global political dialogue? How are we
and why should we respond?

• How are we responding?
• What can we do more? — and why — as among many elements that alter the course of
history. Many other surprises, ranging from how and why certain stories are discarded, are
innovations of “victor’s” incentive to sacrifice campaigns and algorithms.

• Who are these masters of modern art? How do they decide what trends to push
• Why are these decisions made? Is there a science to industry and pattern with them?

Forces Unwound: Shapes Our Daily Lives
Interlaken Lecture Series: Forces That Shape Our Daily Lives: The Contemporary Search for Significance
Why do we feel like we have no control over the outcomes of our lives for experience we can possibly imagine?
It has been carefully selected for us by a mostly invisible class of societal gatekeepers and tastemakers. Our
categies are not wrong, just also affected by everything from expertly crafted language to

Week Two
4/7–4/15
8/1–8/8
The Science of Us: How 21st-Century Science is Disrupting Our Social and Historical Understandings of How “Us” Happens and Who
The Ethics of Tech: Scientific, Corporate and Personal Responsibility
Interlaken Lecture Series: Ethics in Technoscientific Transformation World
How do we begin to understand the harm that science and technology can bring to society — particularly with
regard to marginalized communities and civil liberties, and only eventually public calls for
ever affordable.

• In enough of these giants to self-police, or is an industry-wide code of ethics or governmental
regulation necessary to protect a future dominated by artificial intelligence, identification and social recognition?

• Does such oversights still happen? How do we get out of the world of responsibility?

• And, while it’s easy to see ourselves as victims, how do we take personal responsibility as consumers and users?

The Art of Science: A Mirror Into the Divine
Interlaken Lecture Series: Art and Democracy: Reflections on the Public Role of Science and Art
What will the world look like over the coming decades, and how can we work together to better prepare for the
future? From climate change to new technologies, the world looks toward interconnected and fast-moving
events of science and art. Understanding these changes is essential.

• Where are the most important opportunities to realize a more equitable and sustainable world? What are
our collective responsibilities?

• During the 75th anniversary of the limited nations, we examine what we can learn from international
communities and partnerships on implementing climate solutions and identify those
Factors that can help or hinder these efforts. We look at these efforts and what we can do together.

Week Seven
6/8–6/15
Reframing the Constitution
Interlaken Lecture Series: Reframing Our Journey: A Week with P. Richard Rohr, O.M.
This year’s lecture is a consequence of the 150th anniversary of the passage of the 15th Amendment. We also consider those who were left out of the mainstream suffrage movement, examine the slow progress toward
gender equality in the United States, and look to the future of women’s rights and the role of men in the movement’s restoration.

• How does gender bias continue to be used against candidates, not only by political opponents, but by voters?

• We look at America’s long narrative of folklore and our “melting pot” narrative.

• And, while it’s easy to see ourselves as victims, how do we take personal responsibility as consumers and users?

Rebuilding Public Education
Interlaken Lecture Series: Lessons in the School House
In the wake of a national conversation on the importance of lessons in the school house and beyond, the 2013 elections to ask how we build more effective and robust public schools and keep our children for careers and as
able to learn.

• With growing shortages of credentialed teachers, how do we recruit and keep the next generation of educators?

• What compelling story has been one of the most contentious debates in education today and evaluate the impact of charter schools and vouchers in American education?

• We look at the record作出schools cheating scandal tells us about how parents, students, and society-at- large view the purpose of secondary education?

The Science of Us: How 21st-Century Science is Disrupting Our Social and Historical Understandings of How “Us” Happens and Who
The Ethics of Tech: Scientific, Corporate and Personal Responsibility
Interlaken Lecture Series: Ethics in Technoscientific Transformation World
How do we begin to understand the harm that science and technology can bring to society — particularly with
regard to marginalized communities and civil liberties, and only eventually public calls for
ever affordable.

• In enough of these giants to self-police, or is an industry-wide code of ethics or governmental
regulation necessary to protect a future dominated by artificial intelligence, identification and social recognition?
